About US

400K
Bitcoin Wallet & Private Keys Extraction speed per seconds in HEX-KEY (Recommended spec)

800K
Ethereum Wallet & Private Keys Extraction speed per seconds in HEX-KEY (Recommended spec)

1M+
Average speed per second for extracting wallets and comparing wallets with balance

10M
Total issuance of HEXK tokens. only be received as a reward by contributing to the HEXK-Pool.

6M
Total amount of HEXK scanning contribution rewards deposited (locked) in the HEXK-Pool

4M
total starting circulation of HEXK tokens available on the market. (Other 6M HEXK token is locked)

HEXK Tokens can be used to purchase HEX-KEY, a standalone Bitcoin / Ethereum wallet-key extraction and matching program. HEXK-Pool is a free, decentralized wallet-key streaming scanning pool where you can participate and contribute to wallet-key scanning and receive HEXK Tokens as a reward. (At least 500 HEXK deposit is required)

HEX-CHAIN Distributed ecosystem is Based on three core components

HEX-CHAIN   HEXK Token (SOL Contract)

HEX-KEY   HEX-KEY (Paid Program)

HEXK Pool   HEXK-Pool (Scanning Pool)

Our Goals

Mass scanning of wallets holding Bitcoin and Ethereum balances and extraction of the private keys of target wallets.

▽▽

Redistribution of Bitcoin and Ethereum to HEXK token holders and HEX-CHAIN network participants.

▽▽

Ultimately absorbing the combined market capitalization of Bitcoin and Ethereum.

▽▽

Based on key-map construction, generating a Lattice-based decryption algorithm for cracking SHA-256 and Elliptic Curve (ECC).

The HEXK token is an asset (coin) within the ecosystem that can be obtained through purchase on DEX or CEX exchanges, or by participating in the HEXK-Pool to contribute computing power and receive it as a reward. It offers the following benefits to its holders:

The HEXK-Pool is a free program open to everyone. It is a P2P distributed chain for wallet-key data mining, similar in form to cryptocurrency mining.

All participants must deposit a minimum of 500 HEXK in their HEXK token wallet. They will receive HEXK tokens as a reward every 5 billion scan points in the HEXK-Pool. The 500 HEXK deposited for HEXK-Pool participation can be withdrawn by the user to an external wallet at any time.

(1) The HEXK token can be used to purchase HEX-KEY (a standalone wallet-key extraction and comparison program)

(2) It can be cashed out by exchanging it for USDT, SOL, or other cryptocurrencies through trading on an exchange.

(3) Holders of the HEXK token will automatically receive a distribution of Bitcoin and Ethereum found during the HEXK-Pool scan process at regular intervals. The distribution is proportional to the amount of HEXK tokens they hold relative to the circulating supply of HEXK tokens at the time of distribution.
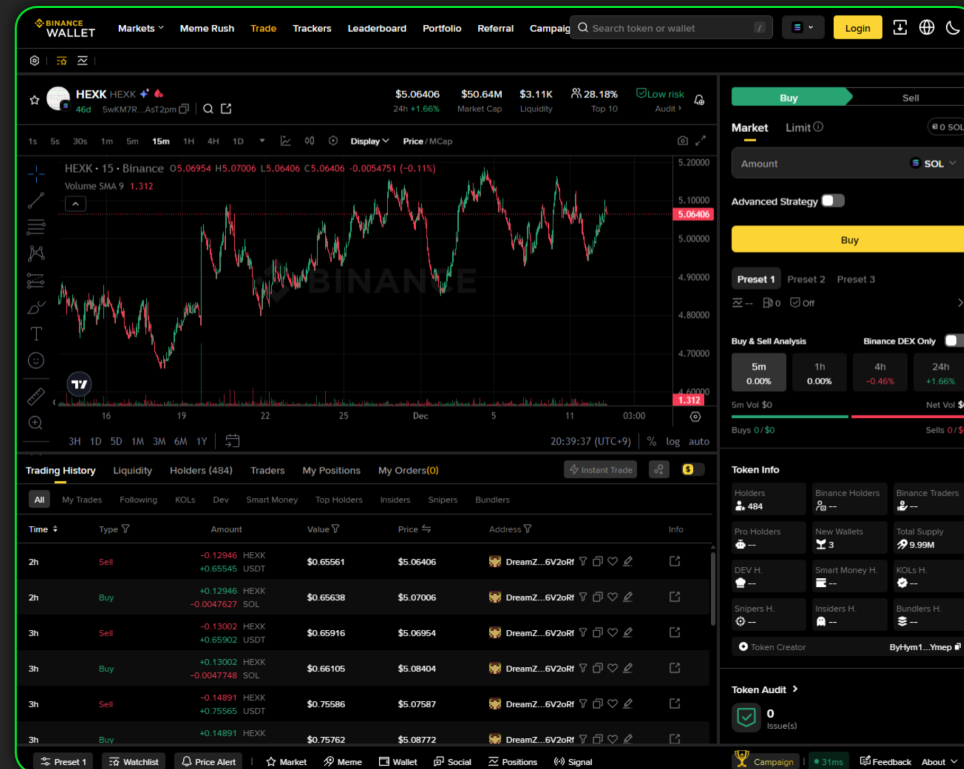

HEXK Token

The HEXK token is currently available for trading on Binance DEX, Raydium, and Jupiter Exchange. It has been confirmed for listing on the LBank exchange (CEX), which is ranked 13th globally (as of December 13, 2025).

The first Centralized Exchange (CEX) listing will commence with L Bank on December 30, 2025, followed by sequential listings on Top-Tier global exchanges(CEX & DEX).

HEXK token supports trading pairs based on USDT and Solana.

Furthermore, the HEX-CHAIN team is currently developing its own proprietary DEX project based on the HEXK token. The platform is being designed to enable swaps and futures trading for various cryptocurrencies, utilizing HEXK within the ecosystem.
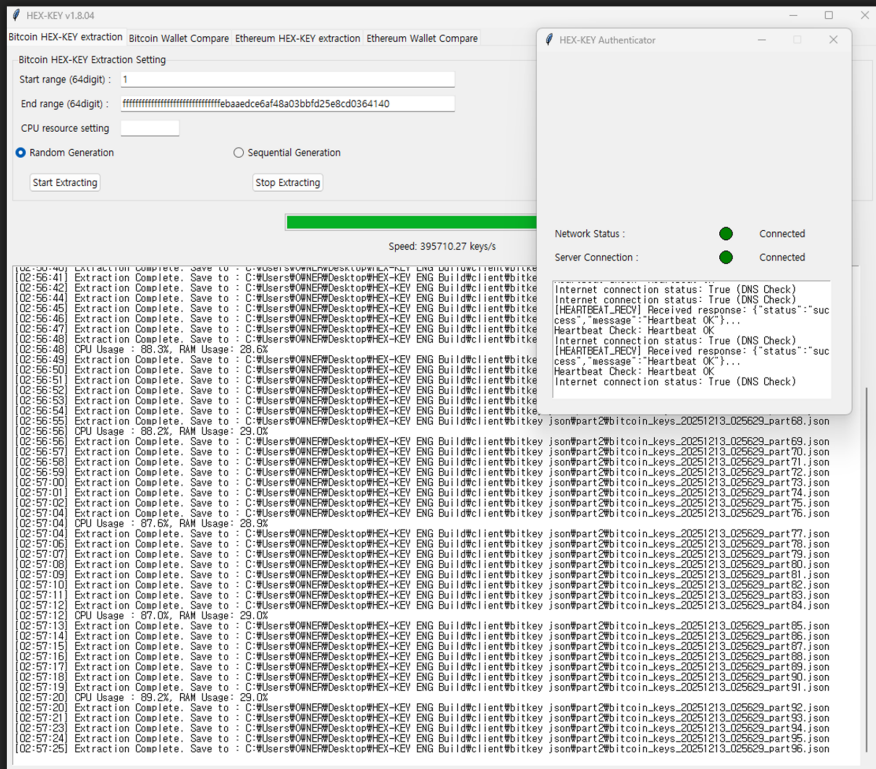

HEX-KEY

HEX-KEY

BITCOIN & ETHEREUM Wallet – WIF Private Key RAW Cracker

www.hex-key.org   support@hex-chain.org   www.hex-chain.org

HEX-KEY is a standalone Bitcoin / Ethereum wallet-key extraction and reconciliation program. It generates and stores Bitcoin and Ethereum wallets and private keys in all formats directly on the user's local PC. Through a high-speed matching process, it identifies wallets containing balances and exports their specific private keys to a separate text file.

Based on recommended system specifications, the software achieves extraction rates of over 360,000 per second for Bitcoin and 800,000 per second for Ethereum.

With a matching speed exceeding 1 million operations per second, it cross-references generated wallets against a database of addresses holding balances to instantly locate active wallets.

HEX-KEY

HEX-KEY supports execution in Windows 10 / 11 OS, Linux Ubuntu, and Mac OS environments. (support in desktop, laptop and server HPC)

All executable programs and package files can be downloaded through the official HEX-KEY website.

Developed using C, C++, and Python, HEX-KEY is engineered to fully exploit the maximum computational capacity of a computer.

By implementing asynchronous processing across multiple concurrent threads, the software leverages advanced parallel computing to achieve world-best processing speeds and efficiency.

HEX-KEY is utilized for recovering lost wallets, resolving keys for dormant wallets, and conducting research in blockchain cryptography. This software is utilized for recovering lost wallets, resolving keys for dormant wallets, and conducting research in blockchain cryptography.

HEX-KEY licenses can be purchased directly through the dashboard on our official website.
We offer a total of six flexible plans, ranging from a 1-day pass to a 12-month Annual Pack
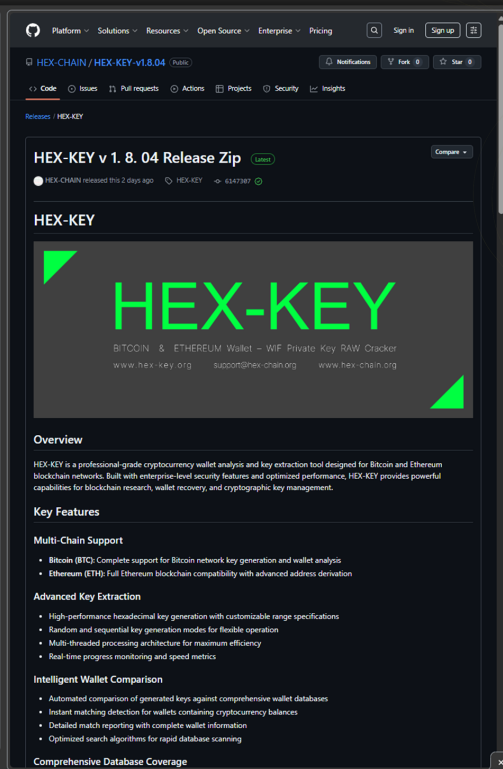

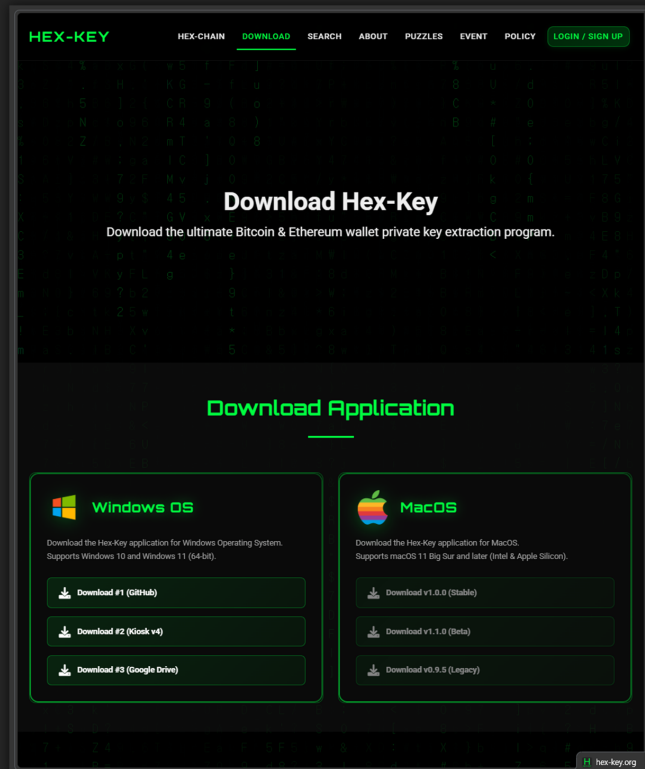

Payment & Activation
Licenses can be purchased using USDT or HEXK tokens.
Usage rights are granted by connecting a Solflare wallet and submitting the required transaction.

Available Products

HEX-KEY Annual Pack (12 Month)
HEX-KEY Annual Pack
Features:
✔ HEX-KEY Annual Pack
✔ 12 Month (365 Days) license to use
License Duration: 365 days
Price: 3600 USDT / 180 HEXK
BUY WITH USDT / BUY WITH HEXK

HEX-KEY Entry Pack (6 Month)
HEX-KEY Entry Pack (6 Month) License
Features:
✔ HEX-KEY Entry Pack (6 Month) License
✔ 6 Month (180 Days) license to use
License Duration: 180 days
Price: 2400 USDT / 120 HEXK
BUY WITH USDT / BUY WITH HEXK

HEX-KEY 3 Month License
HEX-KEY 3 Month License
Features:
✔ HEX-KEY 3 Month License
✔ 3 Month (90 Days) license to use
License Duration: 90 days
Price: 1900 USDT / 90 HEXK
BUY WITH USDT / BUY WITH HEXK

HEX-KEY Monthly License
HEX-KEY Monthly License
Features:
✔ HEX-KEY Monthly License
✔ 1 Month (30 Days) license to use
License Duration: 30 days
Price: 900 USDT / 40 HEXK
BUY WITH USDT / BUY WITH HEXK

HEX-KEY Weekly License
HEX-KEY Weekly License
Features:
✔ HEX-KEY Weekly License
✔ 1 Week (7 Days) license to use
License Duration: 7 days
Price: 250 USDT / 12 HEXK
BUY WITH USDT / BUY WITH HEXK

HEX-KEY 1 DAYS
HEX-KEY 1 Days License
Features:
✔ HEX-KEY 1 Days License
✔ 24 Hours license to use
License Duration: 1 days
Price: 40 USDT / 2 HEXK
BUY WITH USDT / BUY WITH HEXK

HEX-KEY

Release version of HEX-KEY is now available on official website.
Users can download it at hex-key.org/download page.

A license purchase is required to use the software. After signing up and logging in, please purchase a license on the Purchase page.
You can then use the HEX-KEY by logging in with your registered ID.

Users can purchase HEX-KEY licenses on the Purchase page using either USDT or HEXK tokens. When purchasing with HEXK tokens, a special discount rate is applied. The amount of HEXK tokens required for the purchase adjusts dynamically based on the current market price of the HEXK token on exchanges. This mechanism ensures that as the number of HEX-KEY users grows, demand for HEXK tokens increases, driving potential upward price movement.

To complete a license purchase, users must install and connect 'Solflare', a Solana-based decentralized wallet. During the purchase process on the website, users must approve the transaction through transaction submission and verification to facilitate payment in HEXK or USDT.

Please note that a small amount of Solana (SOL) must be held in the wallet to cover transaction fees. The estimated network fee for a license purchase is approximately 0.0001 SOL.

HEXK-Pool

Fully Distributed Data Chain

Peer-to-Peer Network base

ZK-Proof Submission & TX

Participation is open to all

Streaming Wallet-Key Scan

HEXK Pool

Target Bitcoin hold wallets

Target Ethereum hold wallets

Finding Private Key of wallets

Redistributed to HEXK holders

Total Market Cap Absorption

Value appreciation of HEXK

Reset the blockchain market

HEX-CHAIN

Not your keys, Not your coins

We break the rules of blockchain ecosystem

hex-chain.org

HEXK-Pool

Bitcoin Target Wallets

A total of 25.61 million Bitcoin wallet addresses containing 0.0001 BTC or more.

(This accounts for 99.81% of the entire circulating supply of Bitcoin)

Ethereum Target Wallets

A total of 30.18 million Ethereum wallet addresses containing 0.01 ETH or more.

(This accounts for 99.74% of the entire circulating supply of Ethereum)

HEXK-Pool Reward Mechanism

The 6 million HEXK deposited in HEXK-Pool is distributed as follows:

Basic Scan Reward : 1.0 HEXK reward per 5 billion Wallet-Key scans
Discovery Bonus : 10 ~ 1,000 HEXK + 10% of discovered wallet assets when balance is found
HEXK Holder Reward : Automatically distribute discovered Bitcoin / Ethereum according to HEXK holdings
HEXK-POOL Synchronization : P2P scan range values and scan data chain propagation and verification between nodes every 60 seconds
Reward Halving : Reward amount reduced by half every time 1,000,000 HEXK is distributed from HEXK-Pool
Reward Pool Size : Starts with 6,000,000 HEXK deposit when HEXK-Pool converts to public, no additional issuance

HEXK-Pool, similar to HEX-KEY, concurrently scans all compressed and uncompressed wallet addresses in Bitcoin's P2PKH, P2SH, and Bech32 formats, along with the corresponding private keys that can open these wallets, from a 64-digit hexadecimal raw key value. It rapidly extracts matching information against a target list of wallets. For Ethereum, it concurrently and in parallel extracts Legacy wallet addresses and their private keys.

Immediately upon discovering information that matches the target wallet list during this process, the wallet address, balance information, and the private key required to open the wallet are transmitted to the bootstrap node. This transmission is encrypted using Zero-Knowledge Proof (ZK-Proof).
The bootstrap node and seed nodes, via the HEXK-Pool network, verify the addresses and holdings of current HEXK token holders. They then distribute and process the payment of the extracted Bitcoin and Ethereum, proportional to the amount of HEXK tokens held.

HEXK-Pool

HEXK-Pool Bootstrap Nodes --- Coordination Layer (Queue)

Reward Layer (Tracking)

Entry point for new nodes; validates and verifies the balances of Bitcoin / Ethereum wallets submitted by clients, executes the redistribution of Bitcoin/Ethereum to HEXK token holders, and manages HEXK token reward distributions for scan contributors of HEXK-Pool.

Seed Nodes and Peer bridge --- Verification Layer (Validator)

Peer Discovery & Sync

Handles TCP handshakes, peer discovery, connection scaling, and synchronization for client nodes joining the HEXK-Pool; propagates specific scan ranges and task queues to participating nodes, which then execute the scanning process.

Client Nodes and Scanning --- Computation Layer

Bitcoin & Ethereum Key Scan

Regression

Finalized

HEX-CHAIN is more than just a network; it is the fundamental engine of value creation. As the number of HEX-KEY users and HEXK-Pool nodes grows, the ecosystem and the scale of rewards expand proportionally. A larger pool of participants directly increases the success rate of scanning target wallets containing Bitcoin and Ethereum, with all recovered assets being absorbed into the HEX-CHAIN. This process leads directly to a continuous surge in the intrinsic value of the HEXK Token, the core asset of the ecosystem.

Since the Bitcoin and Ethereum balances discovered in the HEXK-Pool are redistributed in proportion to individual HEXK Token holdings, the token's scarcity is exceptionally high. To benefit from this, users must either contribute their computational power to the HEXK-Pool or acquire tokens through exchanges. Regardless of the method, every participant's action ultimately contributes to the upward momentum of the HEXK Token's value.

HEX-KEY generates tangible profits by decrypting dormant Bitcoin and Ethereum wallets. It empowers anyone to extract personal wallets and keys. As demand for the program increases, the necessity to acquire HEXK Tokens for payment and access rises, driving a sustained and powerful upward trend in the HEXK Token price.
Ultimately, HEX-CHAIN establishes a practical link between the HEXK-Pool, the HEX-KEY ecosystem, and the HEXK Token. By doing so, it resolves the traditional blockchain trilemma and stands as a historic blockchain that enables both real-world value absorption and appreciation.
All elements of intrinsic value harvested through HEX-KEY and the HEXK-Pool are concentrated on HEXK Token holders. As the ecosystem scales, rewards become more powerful and scarcity intensifies, creating a perfect, self-sustaining mechanism for price appreciation.

Break the Rules, Reset the Ecosystem. Join the HEX-CHAIN, Buy HEXK, Start Scanning.
